Ryan Thompson

2025 S Phillipi St
Boise, ID 83705
rt75272@gmail.com
(720)541-2541

***EDUCATION*:**

- ***Master of Science in Artificial Intelligence and Machine Learning*** *December 2023 - June 2025*
  Colorado State University Global
- ***Graduate Certificate in Cyber Security*** *July 2025 - August 2026*
  Colorado State University Global
- ***Bachelor of Science in Computer Science*** *August 2016 - May 2021*
  Boise State University
- ***Certificate in Data Science*** *August 2019 - May 2021*
  Boise State University

***WORK EXPERIENCE*:**

- ***AI Data Moderator***
  Augmodo *— August 2026 - Present —*
  - Gathered, annotated, and curated high-quality datasets to train and refine computer vision/ML models based on strict planograms using Python and PyTorch.
  - Enforced data quality control protocols and pre-processing pipelines to eliminate anomalies and ensure alignment between physical environments and AI data pipelines.
- ***Web Developer***
  Contract *— January 2023 - Present —*
  - Engineered user-centric web applications and REST APIs to support AI data collection and deployment of interactive LLM/ML tools.
  - Managed end-to-end development lifecycles, ensuring seamless integration, technical troubleshooting, and client delivery.
- ***Research Assistant***
  Boise State University *— March 2021 - June 2022 —*
  - Optimized deep learning and machine learning algorithms for biomedical image segmentation using Python, TensorFlow, and OpenCV.
  - Managed large-scale biomedical image datasets and model training pipelines to enhance efficiency, evaluation metrics, and model accuracy.
- ***Testing Associate***
  Lionbridge Games *— Nov 2024 - March 2025 —*
  - Partnered with Meta software engineers to perform QA testing, validation, and bug resolution for interactive software updates.
  - Evaluated system features and performance to ensure reliable end user experience and release.
- ***Operations Manager***
  Performance Bicycles *— Jan 2013 - July 2016 —*
  - Analyzed historical seasonal purchasing data and multi-variable repair trends to construct predictive inventory models, minimizing stockout latency and optimizing supply chain pipelines.
  - Modeled technician capacity against dynamic peak demand curves to optimize labor allocation heuristics, maximizing service throughput and operational efficiency.
